

HBO₂ Patient Comfort Positioning Pads

Optimal Positioning & Comfort for all Hyperbaric Patients

- *Specifically designed for use in all hyperbaric chambers*
- *Maximum versatility and flexibility in achieving optimum patient comfort*
- *Three multifunctional configurations include foot elevation support wedge, lumbar support and lateral support*
- *Underlying structure of high density foam to relieve pressure*
- *Cover of fluid-resistant and flame retardant fabric*
- *Conductive cover is anti-microbial, self-deodorizing and easily cleaned*
- *Available in convenient kit or individually*

Three multifunctional pad configurations assure optimum flexibility in creating a position customized to the patient's needs.

HBO₂ Patient Comfort Positioning Pads

Optimal Positioning & Comfort for all Hyperbaric Patients

Customizing Comfort for the Hyperbaric Patient

Trying to comfortably and safely position a patient in a hyperbaric chamber can be a challenge as nurses and technicians strive to properly adjust or position patients using standard hyperbaric pillows. But now the Sechrist HBO₂ Patient Comfort Positioning Pads provide the perfect tools to provide patient comfort, safety and clinical results by enabling a customized position for each patient's condition. Three multifunctional configurations include:

Foot Elevation Support Wedge – allows the patient's legs to be comfortably elevated, eliminating excessive back pressure. The pad is specially designed with depressions to relieve pressure on the feet and ankles, while maintaining the feet in a horizontal position. The Wedge can also be used to elevate a patient's head and shoulders by placing it behind the back.

Lumbar Support Pad – relieves back pressure when placed under the knees. It may also be used as an armrest, particularly useful if the patient receives IV therapy while in the chamber, or between the knees when patients are placed on their sides, or simply as an additional pillow.

Lateral Support Pad – provides additional support for patients who are placed on their sides. A fabric panel is placed under the patient to maintain the ideal position, while comfortably holding the pad firmly against the patient's back. The Lateral Support Pad can also be used as an armrest.

P/N 20511 Positioning Pad Kit (includes all three pads)

P/N 43625 Foot Elevation Support Wedge

P/N 43626 Lumbar Support Pad

P/N 43627 Lateral Support Pad

The HBO₂ Patient Comfort Positioning Pads are designed for safety, flexibility and optimum infection control in a high oxygen environment. The high-density foam structure of the positioning pads provides substantial support and even distribution of pressure in support of wound-prevention goals. The fabric cover top is fluid resistant, flame retardant, anti-microbial, self-deodorizing and easily cleaned using certified disinfectants.

The Sechrist HBO₂ Patient Comfort Positioning Pads can be purchased together as a kit or individually for specific requirements.
